Introduction .....	5
Members of consortium “Seismic waves in complex 3–D structures” .....	9
Research programme of seismic waves in complex 3–D structures .....	11
<b>Velocity models and inversion techniques:</b>	
Z. Jechumtálová & P. Bulant: Effects of 1–D versus 3–D velocity models on moment tensor inversion in the Dobrá Voda locality at the Malé Karpaty region, Slovakia .....	17
V. Bucha: Kirchhoff prestack depth migration in velocity models with and without gradients: Comparison of triclinic anisotropy with simpler anisotropies .....	29
V. Farra & I. Pšenčík: Moveout approximation for P waves in a homogeneous VTI medium .....	41
<b>Ray–based Born approximation:</b>	
L. Šachl: Effect of caustics on the ray–based Born approximation .....	55
L. Šachl: Born and ray–theory seismograms in 2D heterogeneous isotropic models .....	83
<b>Paraxial ray methods in anisotropic media:</b>	
U. bin Waheed, V. Červený, E. Iversen & I. Pšenčík: Tests of two–point paraxial traveltimes formula in inhomogeneous anisotropic media .....	113
V. Červený, E. Iversen & I. Pšenčík: Two–point paraxial travel times using dynamic ray tracing in wavefront orthonormal coordinates .....	129
<b>Waves in weakly anisotropic elastic media:</b>	
I. Pšenčík & V. Farra: Second–order traveltimes and first–order spreading of reflected/transmitted P waves in inhomogeneous, weakly anisotropic media ...	139
L. Klimeš & P. Bulant: Single–frequency approximation of the coupling ray theory .....	143
<b>DVD–ROM with SW3D software, data and papers:</b>	
P. Bulant: Interpolation within ray tubes — state of the art .....	169
V. Bucha & P. Bulant (eds.): SW3D–CD–16 .....	183
