Introduction .....	5
Members of consortium “Seismic waves in complex 3–D structures” .....	9
Research programme on seismic waves in complex 3–D structures .....	11
<b>Velocity models and inversion techniques:</b>	
B. Růžek & I. Pšenčík: P–wave VSP travelttime inversion in weakly and moderately anisotropic media .....	17
I. Pšenčík & V. Farra: Weak–anisotropy moveout approximations for P waves in homogeneous TTI layers .....	61
V. Bucha: Kirchhoff prestack depth migration in simple orthorhombic and triclinic models with differently rotated elasticity tensor: comparison with zero–offset travel–time perturbations .....	81
P. Bulant: Feasibility of anisotropic inversion based on P–wave travel–time curves .....	103
<b>Paraxial ray methods in anisotropic media:</b>	
L. Klimeš: Superpositions of Gaussian beams and column Gaussian packets in heterogeneous anisotropic media .....	123
V. Červený & I. Pšenčík: Green function as an integral superposition of Gaussian beams in inhomogeneous anisotropic layered structures in Cartesian coordinates .....	131
<b>Waves in weakly anisotropic elastic media:</b>	
L. Klimeš: Reference transversely isotropic medium approximating a given generally anisotropic medium .....	155
<b>Ray theory for viscoelastic waves in anisotropic media:</b>	
L. Klimeš: Frequency–domain ray series for viscoelastic waves with a non–symmetric stiffness matrix .....	159
<b>Ray theory for electromagnetic waves in bianisotropic media:</b>	
L. Klimeš: Ray series for electromagnetic waves in static heterogeneous bianisotropic dielectric media .....	167
<b>DVD–ROM with SW3D software, data and papers:</b>	
V. Bucha & P. Bulant (eds.): SW3D–CD–20 .....	183
