Introduction	5
Velocity models and inversion techniques:	
H. Xiao & I. Pšenčík: Determination of P-wave anisotropic parameters and thickness of a single layer of arbitrary anisotropy from traveltimes of a reflected P wave	9
V. Bucha: Kirchhoff prestack depth scalar migration of complete wave fields in a simple velocity model with triclinic anisotropy: PP, PS1 and PS2 waves	29
Ray methods in isotropic elastic media:	
P. Bulant: Two factors affecting the speed of interpolation within ray cells	41
Waves in anisotropic elastic media:	
V. Farra & I. Pšenčík: Approximate P-wave reflection coefficient in weakly-to-moderately anisotropic media of arbitrary tilt	47
V. Bucha: Ray-velocity vectors of reflected S1S1 and S2S2 waves displayed on the ray-velocity surfaces in a simple homogeneous velocity model with triclinic anisotropy	63
Ray theory for anisotropic viscoelastic media:	
L. Klimeš: Two S-wave eigenvectors of the Christoffel matrix need not exist in anisotropic viscoelastic media	73
L. Klimeš: Tracing real-valued reference rays in anisotropic viscoelastic media ..	77
DVD-ROM with SW3D software, data and papers:	
V. Bucha & P. Bulant (eds.): SW3D-CD-24	95
